

VITAL E NEWBORN- vitamin e, vitamin a, vitamin d injection, emulsion
Stuart Products, Inc.

Disclaimer: This drug has not been found by FDA to be safe and effective, and this labeling has not been approved by FDA. For further information about unapproved drugs, click here.

INDICATIONS:

VITAL E–Newborn is a clear, sterile, non-aqueous solution of vitamins E, A and D for use as a supplemental source of vitamin E, vitamin A and vitamin D in newborn calves, lambs and piglets. Each mL provides Vitamin E in its highest biologically-available form *d-alpha* tocopherol, the same form found in colostrum and milk.

Newborns are born deficient in fat-soluble vitamins and depend on colostrum and milk to provide adequate amounts. A reduced intake of these critically important vitamins can result in marginal deficiencies that may not be visible.

Intramuscular or subcutaneous injections of **VITAL E–Newborn** offer an efficient and rapid method to increase the status of vitamins E, A and D in newborns.

ADMINISTRATION AND DOSAGE:

Intramuscular or Subcutaneous Administration Only.

SUGGESTED DOSAGE:

Calves (Dairy and Beef)

At Birth 3-5 mL

Lambs

At Birth 1-2 mL

Piglets

At birth 1/2 mL

At weaning 1 mL

CAUTION: Anaphylactoid or allergic reactions, which may result in deaths, may occur in individual animals. Should such reactions or hypersensitivity occur, treat immediately with injection of epinephrine and/or antihistamines.

Do Not Exceed Recommended Dosage.

IMPORTANT: Stored between 40° to 78° F (4°-26°C). Protect from freezing.
