Why use UVA + UVB Protection?

Unprotected exposure to the sun can lead to UV-induced skin damage. UVB rays mainly cause burning while UVA rays can cause an alteration to the skin structure leading to wrinkles, loss of firmness and the appearance of age spots. To help protect against both UVB and UVA rays, it is important to use a sunscreen that provides broad spectrum UVA+UVB protection. Scientific research shows that topically applied antioxidants on the skin help to protect from harmful free radicals, that lead to the signs of photo aging. Although antioxidants do not replace the need for sunscreen, they enhance the protective value of a well-formulated sunscreen.

Capital Soleil Daily Anti-Aging* Face Sunscreen

provides broad spectrum SPF 50 protection and fights skin-aging free radicals. It contains a unique antioxidant complex (Vitamin E & Grape Extract), effective UV filters, and Vichy 15 Mineral-Rich Water to help protect your skin to keep it looking healthy and beautiful.
