

**INDICATIONS** - Intraoperative hypotension, procedure, hypohydrated, for solution  
**Nonsterile Solution**

**RIGHTS OF PRESCRIPTION INFORMATION**  
The following is not a complete list of information needed to use INDICATIONS FOR INJECTION safely and effectively. See full prescribing information for INDICATIONS FOR INJECTION.

**INDICATIONS FOR INJECTION, For Information on**

**INDICATIONS, Approval 2004**

- Indications for hypotension associated with anesthesia (CNS) in open heart, minimally-invasive, cardiac, thoracic, and other minimally-invasive, for the prevention of (1)
- Adult and pediatric anesthesia and sedation, general anesthesia
- Adult and pediatric anesthesia and sedation, general anesthesia (HCC) including high-dose epidural anesthesia
- Adult and pediatric anesthesia and sedation, general anesthesia (HCC) including high-dose epidural anesthesia (HCC)

- Limitation of Use (2)
- Contraindications for hypotension has not been studied for treatment of established nausea and vomiting.

**DOSE AND ADMINISTRATION**

- Recommended Dosage (2.1)
- Administration of Indication for Injection as an intravenous infusion, complete the intravenous infusion 30 minutes prior to anesthesia.
- Administration of Indication for Injection as Day 1 as an intravenous infusion over 20 to 30 minutes (adults)
- An additional intravenous infusion for Day 1 as an intravenous infusion over 20 to 30 minutes (adults)

**DOSE FORMS AND STRENGTHS**

- Indication for Injection (150 mg intravenously over 20 to 30 minutes) (see full prescribing information)
- Indication for Injection (150 mg intravenously over 20 to 30 minutes) (see full prescribing information)

**WARNINGS AND PRECAUTIONS**

- **Cardiac Interactions:** Propofol is a weak inhibitor of CYP2A6 and agonist, the active moiety, is a substrate, inhibitor, and inducer of CYP2A6, see full prescribing information for contraindications regarding cardiovascular interactions.
- **Hypersensitivity Reactions:** Including anaphylaxis and anaphylactoid reactions may occur during or soon after infusion. It is important to monitor for signs and symptoms of hypersensitivity reactions.
- **Administration of Indication for Injection as Day 1 as an intravenous infusion over 20 to 30 minutes (adults)**
- **Administration of Indication for Injection as Day 1 as an intravenous infusion over 20 to 30 minutes (adults)**

**ADVERSE REACTIONS**

- **Cardiac Interactions:** Propofol is a weak inhibitor of CYP2A6 and agonist, the active moiety, is a substrate, inhibitor, and inducer of CYP2A6, see full prescribing information for contraindications regarding cardiovascular interactions.

**HOW SUPPLIED/STORAGE AND HANDLING**

See full prescribing information for Indication for Injection for information on storage and handling. See full prescribing information for Indication for Injection for information on storage and handling. See full prescribing information for Indication for Injection for information on storage and handling.
